

A compact and modular material handling device designed to transfer and stage conveyable product by transfer from spine section to staging locations and staging locations to spine.

### Key Functions

- Reliable staging, retrieval and re-sequencing of conveyed product.
- Retractable diverting side guards ensuring proper product tracking along main spine.
- Modular “slice” design configurable for multiple staging applications.
- Compact design enabling easy interface in tight layout conditions.
- Flexible, configurable staging capacity.

### Specifications

Supply Power	Dependent on electric vs. pneumatic drive
	electric: 24Vdc @ 5amp max.
	pneumatic drive: 0 to 1 cfm
Divert Cycle Speed	3 seconds
Protection	Thermal and electric overload
Linear Speed	45m/min to 55 m/min
Physical Construction	Powder coated steel *
Overall Length	2680 mm (105.5 inches) *
Drive frame length	1630 mm (64.2 inches) *
Width	508 mm (20 inches) *
Height to top of roller	341 mm (13.4 inches)
Weight	80 lbs.
