For Immediate Release

### **United Sortation Solutions to Exhibit Space/Cost Effective, High Speed Specialty Conveyor and Turning Units at ProMat 2007**

**Owings Mills, MD, October 9, 2006**-United Sortation Solutions (USS), a material handling innovation leader, announced today that the company will showcase three of the most cost effective and space saving material handling solutions in the market today at the upcoming ProMat 2007, McCormick Place South, Chicago, IL, January 8-11, 2007.

System integrators, end users, and conveyor resellers are invited to tour the USS booth (No.5541) where they will be able to view the following modular designs and solutions that can be seamlessly integrated into any material handling system:

- **Vertical Reciprocating Conveyor (VRC):** A compact design that enables vertical transport of totes or boxes using quiet, reliable, and efficient belt actuator technology. This unit is capable of multiple entry and exit destinations at varying elevations.
- **Horizontal Storage and Retrieval System (HSRS):** A compact, modular material handling device designed to transfer and stage conveyable product by performing a bi-directional transfer from a conveyor line to and from storage locations at a rate of 664 totes/hour.
- **The New Flexible Turning Unit (FTU):** A revolutionary method to maintain product orientation while diverting, saving valuable floor space in your crowded facilities. The FTU can work as a small footprint 90 degree turn or as a 1:3 transfer or merge while maintaining tote or carton orientation.

United Sortation Solutions (<http://www.unitedsortation.com>) specializes in integrated design, development and production of material handling machinery. USS provides custom solutions from standard components, reducing maintenance costs and increasing efficiency, safety and productivity. Headquartered in Owings Mills, MD, USS has overcome material handling challenges for companies throughout North America and Europe.
